

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (original) A method of work sharing and communicating over the internet with a web site system that includes at least a communication component and a data storage component allowing users in professional offices to electronically input data over the internet comprising,

electronically storing the data received over the internet in the data storage component of the web site system;

automatically determining to which other related portions of the web site system the electronically stored data will be sent;

automatically distributing the electronically stored data to the automatically determined other related portions of the web site system;

electronically storing the data distributed to the other related portions of the web site system in the data storage component; and

automatically communicating over the internet to other relevant users of the newly stored data in the web site system.

2. (original) The method of claim 1, wherein said automatically determining is controlled by a computer program programmed to determine which portions of the web site system the electronically stored data will be sent.

3. (original) The method of claim 2, wherein the computer program controls determining to which portions of the web site system the electronically stored data is relevant, and enacts the automatic distribution to distribute the electronically stored data accordingly.

4. (original) The method of claim 3 wherein the portions of the web site system further comprise portions of a knowledge-management system.

5. (original) The method of claim 4 wherein the knowledge-management system further comprises a service industry knowledge management system.

6. (original) The method of claim 5, wherein the service industry is from the group consisting of a medical practice, hospital, and a medical health maintenance organization.

7. (original) The method of claim 5, wherein the service industry is from the group consisting of a law office, law firm, courthouse, and a legal business entity.

8. (original) The method of claim 5, wherein the service industry is from the group consisting of an accounting firm, tax firm, temporary employment firm, financial and employment business entity.

9. (original) The method of claim 1, wherein the electronic storage occurs on a remote data processing machine that can be accessed from remote terminals via a channel from the group consisting of the internet and an intranet.

10. (original) The method of claim 1, wherein the automatic distributing is controlled by a computer program programmed to distribute the electronically stored data to the automatically determined portions of the web site system.

11. (original) An apparatus for work sharing and communicating

comprising:

a computer at a web site system that includes at least a communication component and a data storage component allowing users in professional offices to electronically input data over the internet;

a data storage device for electronically storing the data electronically inputted into the web site system;

a source of a computer program for automatically determining to which other related portions of the web site system the electronically stored data will be sent;

a source of a computer program for automatically distributing the electronically stored data to the automatically determined other related portions of the web site system;

a data storage device for electronically storing the data distributed to the other related portions of the web site system; and

a source of a computer program for automatically communicating over the internet to other relevant users of the newly stored data in the web site system.

12. (original) The apparatus of claim 11, wherein the web site system includes terminals intercoupled to the computer by a link.

13. (original) The apparatus of claim 11 wherein the data storage comprises data storage device that stores the first input data and a data storage device that stores the data distributed to the other related portions of the web site system.

14. (canceled)
